Dr. Lev Manovich's Website

"In 2013 Manovich appeared on the List of 25 People Shaping the Future of Design."

Dr. Manovich's website is a collection of his work in data visualization. It covers his various interests such as cultural analytics, social computing, big data and society, digital humanities, digital art history, history and theory of media, and software studies. The website also provides links to his books, interviews, and projects.

His work is important to screen based design because he uses data to create art that is accessed by an interface. His work is highly interactive and he mainly focuses on using social media such as intagram posts as his data set. This provides a current 21st-century perspective of cities and the people inhabiting them.
